ER Doctor Sides

INT. PEDIATRIC WARD - HOSPITAL ROOM - NIGHT

A DOCTOR (Female, 40s, desensitized to things like this) addresses Kerri.

DOCTOR

Law enforcement found your daughter OD'd, approximately 10 PM. Administered Narcan. Patient regained consciousness.

KERRI

She was unconscious?

She looks at Kate, emotional. Kate is shut down.

DOCTOR

Preliminary tests show that the drug she OD'd on was Fentanyl, a much stronger, cheaper substitute for opioids like Oxycontin. Black market pills are unregulated, homemade. Sometimes even one pill can contain a lethal dose.

(finally looking up)

Your daughter's lucky.
